Wiliot – Internet Of Things, not Places

wiliot

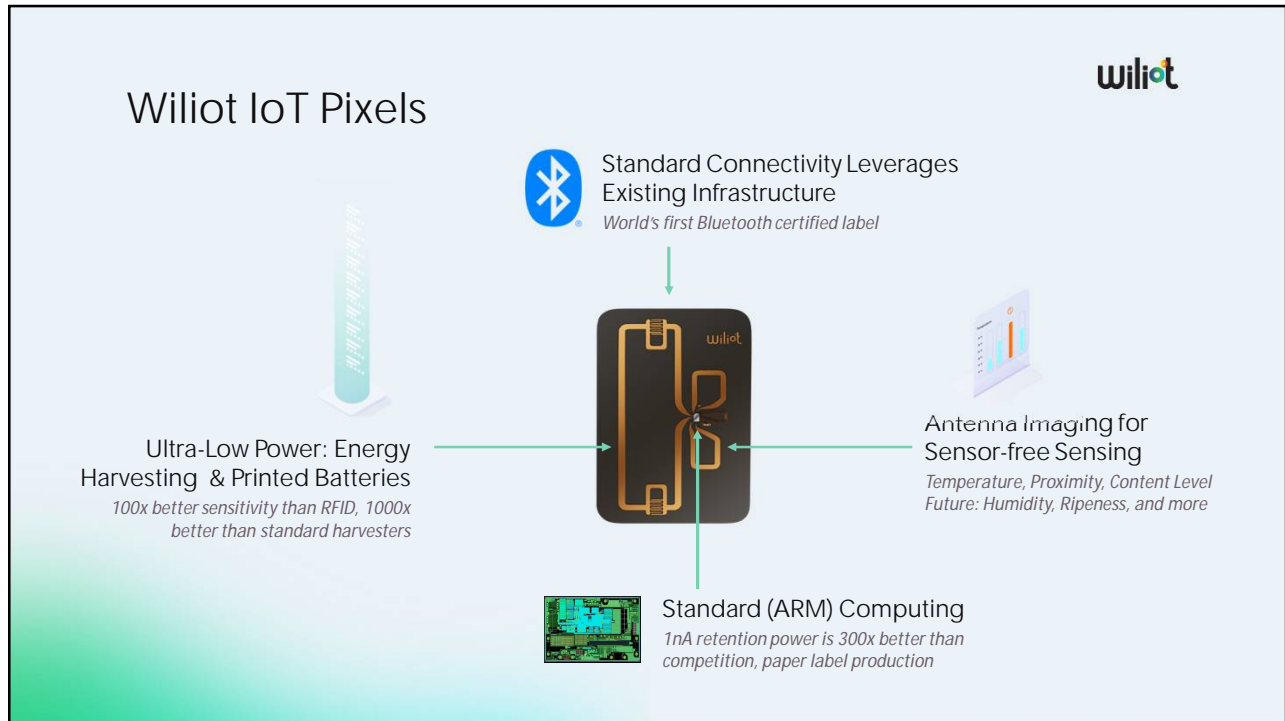

- Wiliot approach to IoT is to make **Things** smart in any location with negligible infrastructure investment
- We do that by using a mass scale of **Pixels**, which are passive, disposable computers used to program any asset to act based on context
- Wiliot is used in a variety of Farm to Fork, Retail, Pharma, and consumer solutions to improve quality, reduce waste and provide transparency of products throughout the life cycle

Supply Chain - Case Study

The photograph shows a zucchini crate in a warehouse with a digital overlay providing real-time data: 'ZUCCHINI CRATE #T104967', a temperature of 15°C, a location pin for 'DC (SHOHAM)', and a timer for '07H'. The wiliot logo is in the top right corner.

Summary

- Adding temperature sensing & real-time location to 1m crates
- Reducing crate pool size & shrink
- Extending shelf life up to 3 days
- Identifying exceptions where FIFO becomes LIFO - extending time to store to 6 days
- Recording temperature over time
- Enabling ripest first ordering in stores

8

Case Study – Food Retail Temperature & Location tracking of Perishables

- Reduce food waste
- Locate lost pallets
- Improve lead times
- Reduce logistics costs
- Improve inventory/sales

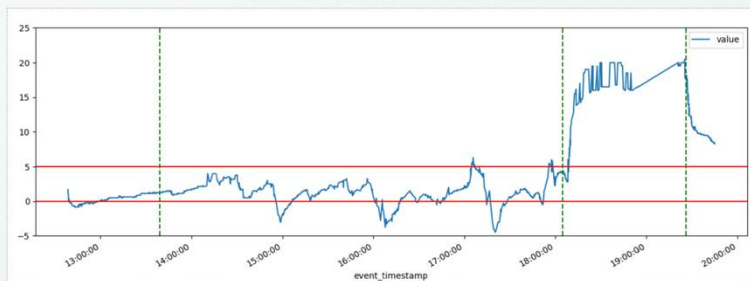

9

Tracking of a Pallet with 50 cases of strawberries

Pallet's temperature(+duration) in different Points of Interest in the supply chain

Strawberries Pallet

Pallet Contained ~50 cases of strawberries.
3 issues identified

Sustained Time below freezing

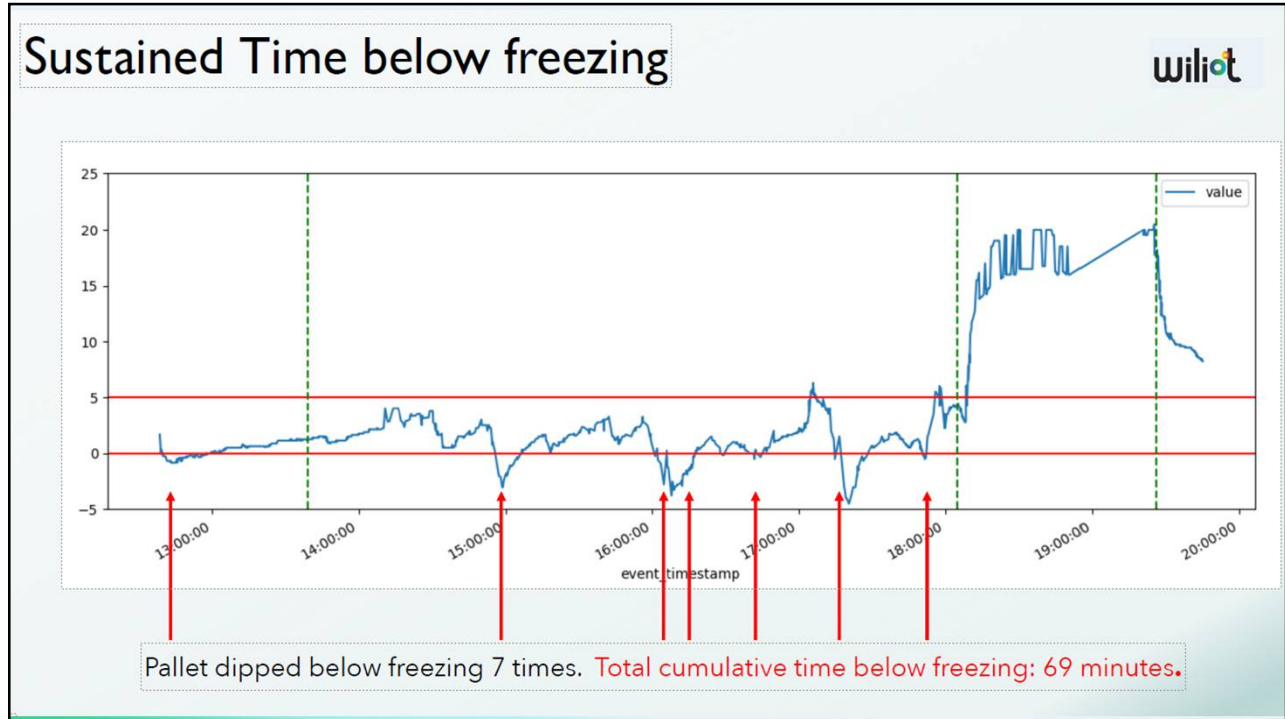

Prolonged trailer time

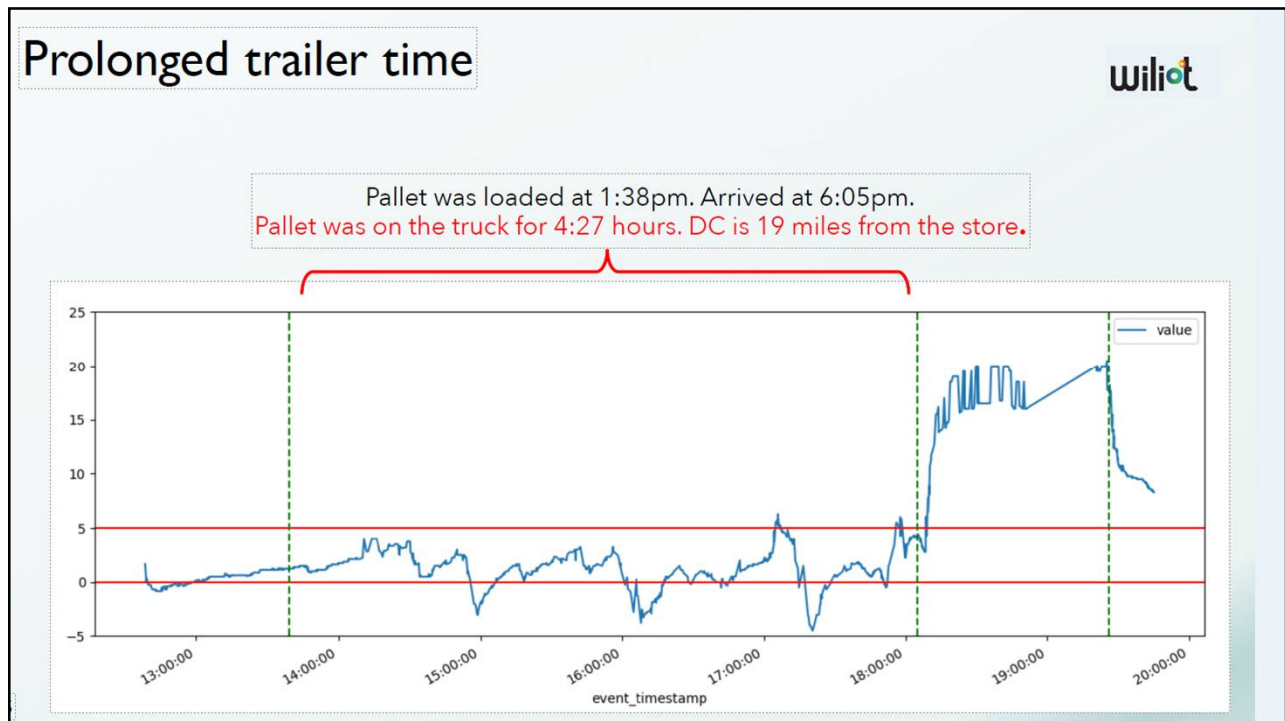

Prolonged time out of temp

Get Started Today

You can experiment, learn, and get started with the Wiliot Platform using Wiliot Kits. These include the services, IoT Pixels & hardware you need to be on your way to the Internet of Everyday Things.

Innovation Kit

\$150.00

Experience the future of ambient IoT, hands-on.
